The Description

G&H Building Services were appointed by GMI construction to undertake the complete design and installation of the mechanical and electrical services at the new Kirklees Engineering College in Huddersfield.

G&H were involved from an early stage taking a vital role in the design team to progress the scheme towards construction.

Once on site, G&H used its expert team of in house engineers to carry out the works, ranging from electrical sub-main distribution, small power, lighting, gas, heating, ventilation, specialist ventilation for motor exhaust, domestic services, air conditioning, BMS system and above ground drainage.

Our sister company, G&H Sustainability carried out the solar thermal installation for this scheme.
