

CAPABILITY DOCUMENT 2023

Formed in 1998, G&H Group has five complementary divisions – Building Services, Projects, Maintenance, Engineering Services and Air Conditioning – allowing us to provide the complete mechanical and electrical public health package.

We operate across a wide range of public and private sectors including health, education, residential, commercial, leisure and retail. Here you can see our case studies.

BUILDING SERVICES

PROJECTS

MAINTENANCE

ENGINEERING SERVICES

AIR CONDITIONING

Complete design and installation of all the MEP services every building needs to operate safely, comfortably and as sustainably as possible.

Three core departments: Preconstruction & Estimating, Design and Contracts & Commercial deliver schemes valued at up to £20 million across the UK.

Independent MEP services for schemes valued between £50,000 and £1 million, with extensive experience delivering projects for education facilities.

Working directly for end users and building and energy consultants, we can also operate as the principal contractor delivering full scope turnkey new build and retrofit solutions.

Delivering fully compliant planned and reactive maintenance for private and public organisations with large estates across the UK.

We have been retained by Leeds City College since 2011 and Bourne Leisure since 2012 to name but two.

Specialist fabrication of all MEP building services equipment and materials which is complemented by electrical process engineering.

This ensures quality is improved; time is saved; costs are cut; productivity increases; bespoke designs are created; safety improved; more space is freed on-site; and, the environmental impact is reduced.

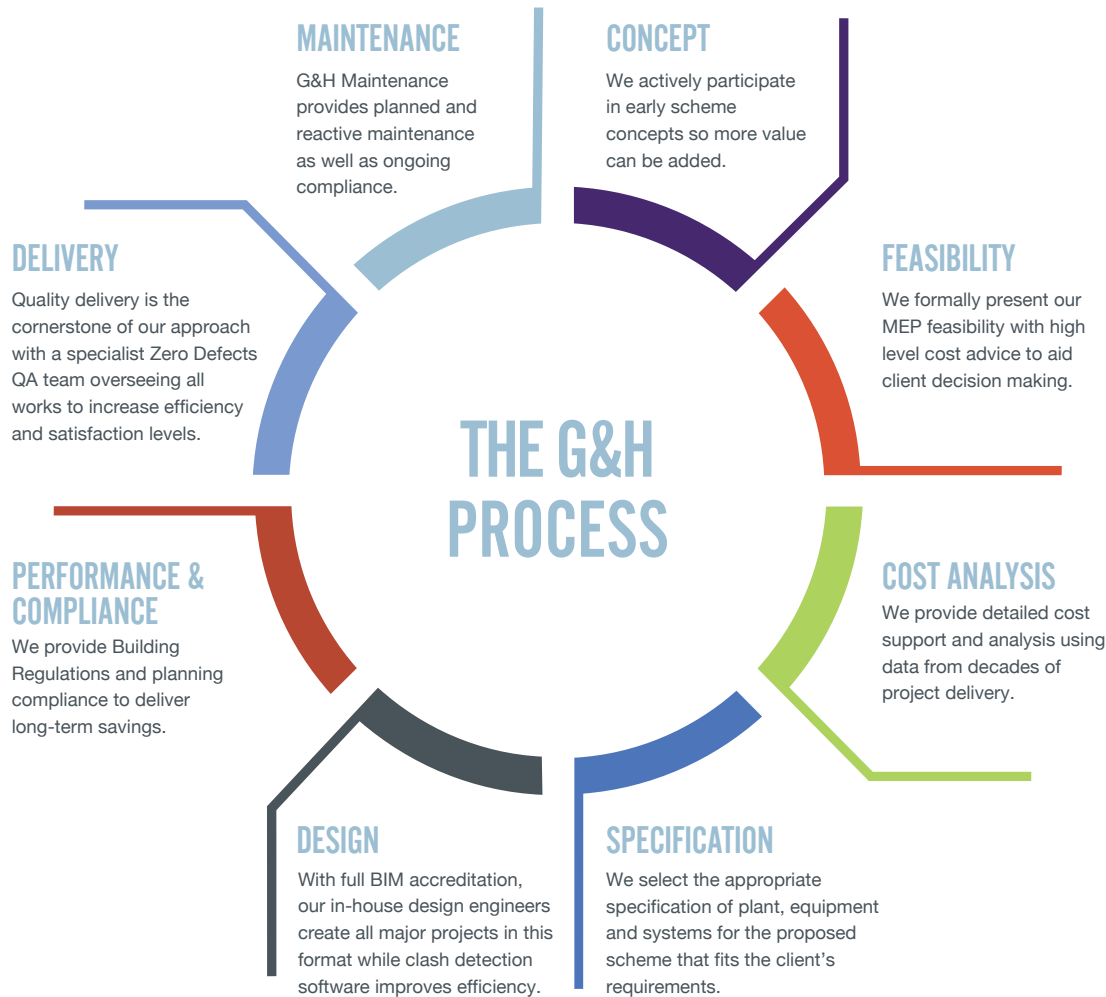

We design, build, install and retrofit air conditioning services for all building types and have Mitsubishi, Toshiba and Dakin approved partner status.

G&H Air Conditioning also provides specialist support for our four other divisions project managing all aspects.

OUR APPROACH

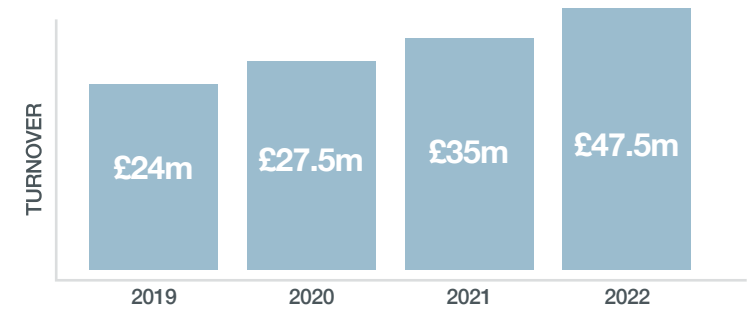

One of our greatest strengths is being involved early in schemes.

This allows us to add value with budget costs, explore VE options, review building materials with our in-house design team to ensure they complement the MEP services and offer a general overview of programme requirements for delivery at site level.

FINANCIAL STANDING

We have a strong financial base with no debt or borrowings and continuously invest in staff development, technology and our Apprentice Training Academy as part of a controlled, structured growth strategy.

INSURANCES

Public Liability:	£10 million
Employers Liability:	£15 million
Contractors all Risk:	£12 million
